

TikLynx to Exhibit at INTIX 2027 in New Orleans

Modern ticketing and venue management platform will showcase connected sales, seating, operations and AI-powered tools at the 48th Annual Conference & Exhibition.

SIOUX FALLS, S.D. — August 31, 2026 — TikLynx announced today that it will exhibit at the INTIX 2027 Annual Conference & Exhibition, taking place January 25–28, 2027, at Hilton New Orleans Riverside in New Orleans.

TikLynx is an end-to-end ticketing and venue management platform that brings online and box-office sales, reserved and general-admission seating, table seating layouts, embedded checkout, event-day scanning, order management, promotions, season tickets, gift cards, analytics and reporting into one connected system.

Conference attendees will also be able to explore Nibsy, TikLynx's built-in AI assistant. Nibsy can generate seating layouts from a description or uploaded image, help teams navigate the platform and reduce the time required to move from event setup to on-sale and showtime.

"I'm excited to attend INTIX 2027, connect with exhibitors and conference attendees, and demonstrate how TikLynx helps organizations move beyond the ticketing basics. We're building a platform that gives teams greater control, brings critical event operations together and uses AI where it can make a meaningful difference."

— Rob Simmermon, CTO and Owner, TikLynx

Attendees are invited to visit TikLynx at Booth 110, see the platform in action and share the operational challenges they want the next generation of ticketing technology to solve.

About TikLynx

TikLynx is a modern ticketing and venue management platform from SimmTech Software. It connects ticket sales, seating, websites, box-office operations, customer and order management, analytics and entry tools in a unified experience designed to simplify complex work without limiting what organizations can accomplish.
